

Scavenger Hunt Activity Instructions

Workplace inspections prevent injuries and illnesses. Inspections of the workplace help identify hazards so corrective action can be put in place. Inspections are legally required to take place in the workplace on a regular, pre-determined schedule.

Recommended Activity

There is a checklist for students and a checklist for workers in the workplace. Complete the mock inspection activity in groups or as individuals. Look for items on the list, and check them off as you find them. Add comments at the end of anything you have observed that needs closer evaluation.

Discussion:

After the activity is completed, have a discussion on each section of the mock inspection. For each section, answer the following questions:

1. Was any item not checked off when doing the inspection?
2. If so, what would be the suggestion to eliminate this hazard? Think both short term and long term suggestions.
3. Was there any other hazards not on this list that were discovered during this mock inspection?
